

12v boost voltage stabilizing inverter

What is a boost inverter?

The new inverter is intended to be used in uninterruptible power supply (UPS) and AC driver systems design whenever an AC voltage larger than the DC link voltage is needed, with no need of a second power conversion stage. This paper proposes a new voltage source inverter (VSI) referred to as a boost inverter or boost DC-AC converter.

What is a stabilizing converter?

These stabilizing converters provide continuous, precisely regulated output over the entire range of a battery's usable voltage. This prevents subjecting loads to fluctuating input voltage which can cause shutdown, diminish performance and possibly damage sensitive circuitry.
