

China builds super solar power plant

XINING, June 9 -- Amid China's green energy revolution, the world's largest solar photovoltaic power plant on the Qinghai-Xizang Plateau is forging a unique development path, ...

The massive growth in wind and solar begs the question: why is China still building coal power plants and, by most analyses, way more than it actually needs? The answer is complicated.

China is adding more solar and wind power to its energy grid than any other economy - but that huge buildout has its challenges. Here's what we can learn

China is leading this surge by a wide margin. In the first half of 2025, the country installed more than twice as much solar capacity as the rest of the world combined, accounting for 67% of...

A massive open-sea solar plant is under construction in China, designed to power millions of homes and test how floating solar works at scale.

China has unveiled plans for a space power station at an altitude of 36,000 km, where sunlight is constant and 10 times more intense than on Earth. Apparently, it will be collecting energy around the ...

By 2030, the world's largest solar power plant is to be built here: 400 kilometers (240 miles) long, an average of 5 kilometers wide and with an installed capacity of 100 gigawatts.

Chinese officials recently unveiled plans for what they claim will be the world's largest solar farm, spanning an immense 610 square kilometres (235 square miles) - roughly the size of...

The US National Aeronautics and Space Administration (NASA) has published aerial images of the Great Solar Wall, China's largest renewable energy project.

China is building an enormous network of clean energy industries on the Tibetan Plateau, the world's highest. The intention is to harness the region's bright sunshine, cold temperatures and...
