

Current status of solar power plants in Spain

Can Spain achieve 62 GW of solar power by 2030?

In order to attain its newly expanded goal of having 62 GW of wind power and 81 GW of solar power installed by 2030, Spain will need to hasten its pace of renewables deployment and overcome obstacles: permitting bottlenecks, anemic growth in rooftop solar, and infrastructure limitations that impede demand.

How much solar energy does Spain have in 2024?

GEM data show that as of May 2024, Spain already has 29.5 GW of utility-scale solar energy installed, and 7.8 GW under construction, accounting for 60% of the country's target of 57 GW of utility-scale solar PV and 5 GW of solar thermal installations by 2030.

Is solar power a good investment in Spain?

Since he took power in 2018, energy developers have built solar parks, proved that power generation had attractive returns and pulled in capital from yield-hungry investors. In 2023 and 2024, Spain added more solar power capacity than any other European country except Germany, whose economy is more than twice its size.

How much does a solar plant cost in Spain?

Operational solar plants were valued at an average of EUR916,000 per megawatt in early 2024, but have now dropped to EUR648,000 per megawatt, according to nTeaser. Spain's solar power capacity has surged in recent years . . . Electricity price that solar plants receive versus average wholesale price, monthly capture rate (%)

Spain marked a clean energy milestone in July 2025, according to APPA Renewables' latest monthly report. Renewables generated 13,871 GWh, covering 55.1% of the national electricity ...

Share of solar PV over the total power generation in Spain 2024 Share of utility-scale photovoltaic energy over the total electricity generated in Spain from 2010 to 2024

After April's blackout, Spain is betting big on solar, storage, and fusion to build a stable grid. Could it lead Europe toward energy independence?

This fact sheet summarises key developments, including the addition of 9.3 GW dc of PV capacity in 2023, cumulative installed capacity to 39.4 GW dc. Highlights include a surge in self-consumption, ...

In order to attain its newly expanded goal of having 62 GW of wind power and 81 GW of solar power installed by 2030, Spain will need to hasten its pace of renewables deployment and ...

The Triple Planetary Crisis Photovoltaic cells have been the building blocks of a solar power boom spurred by Prime Minister Pedro Sánchez, whose support for renewables, combined ...

The very success of solar deployment is straining the grid and revealing cracks in the regulatory framework, creating a critical test for Spain's long-term energy transition goals.

Current status of solar power plants in Spain

Spain's solar PV capacity reached 6 GW in 2024, making it the country's top power source with a 25.1% share, surpassing wind at 24.9%. Renewable generation grew 10.3%, ...

The story behind Spain's solar power meltdown Pedro Sánchez calls his country a "global benchmark" in the transition to greener energy, but prices -- and profits -- have plunged

Simply sign up to the Renewable energy myFT Digest -- delivered directly to your inbox. Spanish solar power is going through a shake out after a plunge in electricity prices left the owners of ...
