

OverviewHistoryEnergy planEnergy sourcesElectricityDistrict heatingTransportCitiesDenmark is well underway with a green transition of its energy production, focussing mostly on wind energy, but with an increasing share of solar energy and other sustainable green technologies. Denmark has considerable sources of oil and natural gas in the North Sea, but is only ranked as number 57 in the world among net exporters of crude oil, as of 2023. It is ...

Denmark is driving a renewable energy revolution, leading the global green transition with wind, solar, and sustainable innovations shaping a cleaner future.

Denmark is currently boasting that around 45% of the total energy consumption is now generated by renewables. This means that the country is well underway to the green transition and "net zero".

Denmark is planning an aggressive clean energy transition. While the country plans to rely on traditional resources, such as offshore wind, they are also looking to build an infrastructure and industry in ...

Denmark's power sector has undergone a transformational shift over the past 30 years from coal-dominated generation to mostly renewable sources. Power generation from renewable ...

Reaching 100% biomethane in heating before 2030 has become a key priority since Russia started the invasion of Ukraine. The Danish society is fully engaged in the energy transition through broad ...

Denmark has been at the forefront of energy transition for quite some time. In 2023, the country moved forward its carbon neutrality target by five years to 2045 and set a new target of a 110 ...

In response to the energy crisis, a June 2022 reform, "Denmark can do more II", accelerated the green transition, fast-tracking renewables and boosting Denmark's energy independence.

Denmark is well underway with a green transition of its energy production, focussing mostly on wind energy, but with an increasing share of solar energy and other sustainable green ...

Danish energy sector is receiving over 1.4 billion DKK in funding to accelerate its green energy transition through expanded heat pump subsidies and greater access to rooftop solar ...

Denmark stands at the forefront of Europe's renewable energy transition, with an impressive 88.4% of its net electricity generation sourced from renewables in 2024.
