

# Energy storage prices hit record highs

Global energy storage additions are on track to set another record in 2025 with the two largest markets - China and US - overcoming adverse policy shifts and tariff turmoil.

Battery storage. In 2025, capacity growth from battery storage could set a record as we expect 18.2 GW of utility-scale battery storage to be added to the grid. U.S. battery storage already achieved record ...

US energy storage deployments have reached a record high despite "multiple headwinds" emerging in 2023, according to Wood Mackenzie. The research firm has warned that 82% of grid ...

With a record-breaking 346 MW of residential storage built in Q3 2024 -- a 63% increase over the previous quarter -- the residential energy storage market has reached an all-time high.

US battery storage hits record 5.6 GW in Q2 2025, led by utility-scale growth, but sourcing rules may slow future gains.

The global energy storage market almost tripled in 2023, the largest year-on-year gain on record, and that growth is expected to continue.

While early adopters continue leading in deployment, activity across the country shows clear demand for utility-scale energy storage as a solution to rising electricity prices and soaring ...

In the first three quarters of 2024, the bidding volumes for battery systems, energy storage systems, and EPC projects all exceeded the same period of 2023 in terms of energy ...

The U.S. energy storage market is stronger than ever, and the cost of the most commonly used battery chemistry is trending downward each year. Can we keep going like this, or ...

Residential energy storage saw unprecedented growth, hitting an all-time high. These trends underscore the accelerating shift toward renewable energy integration and the pivotal role ...
