

Fast charging of energy storage containers at construction sites

The charging solution consists of a 10-foot container, which houses a charging station with up to 150 kW charging power. Battery stacks form a scalable energy storage system that can be ...

Designed to bypass planning restrictions and the limitations of grid-constrained locations, the Charge Qube delivers immediate energy solutions for fleet operators, public charging stations, ...

The Liduro Power Port (LPO) is an energy storage system for power supply on construction sites. It allows for locally emission-free operation and charging of hybrid or fully electric ...

Designed for speed and efficiency, the Charge Qube can be rapidly deployed without the need for complex planning or infrastructure upgrades. Housed within a durable 10-foot sea container, it ...

Mobile battery energy storage systems can recharge electric construction equipment on-site whenever needed. MBESS are easy to transport off-site on a trailer for recharging before returning to the job site.

A mobile EV charger for construction sites delivers on-site electricity to electric vehicles and machinery, ensuring flexible, reliable charging without fixed stations.

This charging system provides a practical solution for dependable energy for businesses, public charging stations, or construction sites. With its modular design, the Charge Qube can ...

Our "Green Construct Charge" (GCC) project uses mobile, battery-powered charging stations to power electric excavators, loaders, and compactors on active job sites, replacing diesel fuel with clean ...

To meet these needs, XiaofuPower's Mobile Energy Storage System offers a robust, scalable, and ready-to-deploy solution designed for the real-world challenges of modern construction.

Charge electric construction machinery and trucks quickly and flexibly with battery containers. Ideal for construction sites without a heavy-duty mains connection.
