

Foreigners comment on China's solar power generation

China is expanding renewable energy exponentially while the U.S. is going backward. How China became the global leader, why the U.S. falling behind and what it means for these ...

As domestic constraints tighten, Beijing's solar dominance is increasingly expressed through overseas localisation, strategic leverage and rule-setting in emerging energy technologies.

Many foreign analysts and investors express admiration for China's aggressive push into renewable energy, recognizing its potential to address both domestic and global challenges related ...

Solar power is the most spectacular of China's clean-energy game changers; its fruits can be seen all around the world and at every scale, from balconies in Baden Baden to seas of glass in...

In China, more wind turbines and solar panels were installed last year than in the rest of the world combined. And China's clean energy boom is going global. Chinese companies are...

China is adding more solar and wind power to its energy grid than any other economy - but that huge buildout has its challenges. Here's what we can learn

Almost three-quarters of all solar and wind power projects being built globally are in China, says a new report that highlights the country's rapid expansion of renewable energy sources.

Can China make more solar power? China can now make more solar power than the rest of the world. Data released by China's National Agency last week revealed that the country's solar electric power ...

While Western media often paints China as the world's coal-guzzling giant, a different energy narrative is unfolding. Imagine this: By 2023, China's solar capacity alone could power all UK households 18 ...

U.S. President Donald Trump may have spurned solar power, but that has done little to slow the solar revolution that is sweeping nearly every other corner of the world, from Pakistan to...
