Who supports the study of lithium-ion battery materials and application?

This work was supported by the National Natural Science Foundation of China(NNSFC) (Grant No. 22309074,22261160570),Natural Science Foundation of Jiangxi Province (Grant No. 20232BAB214022,20242BAB25228),and Foundation of Jiangxi Province Key Laboratory of Lithium-ion Battery Materials and Application (2024SSY05202).

Why do lithium batteries have ionic conductivity & thermal stability?

The enhanced ionic conductivity and thermal stability of the modified lithium salts and their anion-derived interfacial layers enable the batteries to better balance low and high-temperature performance.

What is the optimal operating temperature for a lithium ion battery?

However,as the range of battery application scenarios continues to broaden,increasing attention has been drawn to their applicability and safety in a wide range of operating temperatures. Commercial LIBs typically operate optimally within a narrow temperature range of ~15-35 °C.

What is a battery thermal management system (BMS)?

While a battery thermal management system (BMS) can assist in regulating temperature during short-term operation, prolonged exposure to extremely high or low temperatures can lead to irreversible mechanical damage and even pose serious safety risks .
