

By doubling output at its three European factories (Pikkala, Finland; Pozzuoli, Italy; and Gron, France), Prysmian is positioning itself to meet surging demand for grid modernization.

Grid modernization trends What's Emerging in 2026? - Emerging technologies/solutions Grid-forming inverters Grid-forming inverters are gaining traction, enabling renewables and storage to provide critical grid stability ...

Global composites manufacturer Exel Composites (Vantaa, Finland) has released a new white paper to update the transmission and distribution industry on advances in composite conductor core ...

Discover the International Conference on Nanotechnology in Electrical Grid Modernization (ICNEG) to be held on 7th July 2026 in Helsinki, Finland. Plan your participation today!

As utilities plan for grid modernization--including upgrades to AMI 2.0, DERMS, and Distribution Automation--choosing the right connectivity strategy is critical.

In Finland, Hitachi Energy develops and manufactures many key technologies for the clean energy transition. The company's solutions secure Finland's electricity supply by enabling a flexible, reliable, ...

Three transmission grid modernization projects have been underway in the eastern region of Finland over the period between 2019 and 2022. The first contract, completed in October 2019, covered the ...

Grid expansion and modernization will be necessary to meet the global electricity demand needed for a clean energy future.

Finland also stands out as an emerging player, showing a clear upward trend in investment volume rising from \$6M in 2022 to \$9.2M in early 2025, marking its highest funding year to date and ...

Discover expert perspectives on the future of energy in a series of conversations exploring grid modernization, from aging infrastructure and distributed energy resources to simulation, interoperability, and cybersecurity.
