

How much solar power was generated in April

Increased output from solar farms -- up 33% -- and hydro -- up 24% -- helped lift total clean electricity output by 8% in April, according to industry tracking sources. Data from LSEG shows ...

During the first four months of 2024, solar generation (6.0% of the total) pulled nearly even with hydropower (6.1%) and did surpass it in April by almost 40% making solar the second ...

This is the first month in recorded history where solar energy exceeded nuclear in electricity output. According to Ember, "solar power reached 10% of global power generation for the ...

Renewable energy sources generated nearly one-third of total U.S. electrical generation in April, with solar providing over 10% of total national output, according to a review of U.S. Energy ...

In April, solar provided 87% of new capacity, making it the 20th consecutive month solar has taken the lead, according to data belatedly posted on July 1 by the Federal Energy Regulatory...

Solar hit 10.7% of US power in April, a new record, as wind + solar beat coal and nuclear, and renewables came within 2% of natural gas.

In general, solar production is higher in the summer months when there is more daylight and solar panels can produce more electricity. Solar production typically decreases in the winter months due to ...

According to the U.S. Energy Information Administration (EIA), solar provided 10.64% of all electricity generated in April. That's a 26% increase over April 2024, and a 52% jump from April 2023,...

The US generated 18,938GWh of electricity from utility-scale solar in April 2024, accounting for 6.1% of its total electricity generation.

According to a 10-year resource plan, filed with state regulators in April, the utility had 7,038 MW of operating solar capacity at the end of 2024; it clearly has added more solar since ...
