Do ground-mounted solar panels work?

As the name suggests, ground-mounted solar panels are mounted to the ground, rather than a roof. In most cases, it's easiest and most cost-effective to get a rooftop solar system. But if rooftop solar won't work for your home, ground-mounted systems offer some clear benefits.

Should I choose a roof or a ground-mounted solar system?

If your roof works for solar and can fit enough solar panels to meet your energy needs, it's usually best to choose rooftop solar panels. If you need a really large system that won't fit on your roof and you have enough open land, opt for ground-mounted panels.

Are ground-mounted solar panels better than rooftop solar panels?

Unlike rooftop solar panels, ground-mounted panels are not limited by the size or structure of a building and have the ability to generate more electricity. Fixed ground-mounted solar panels can be installed directly in your yard, usually in a flat and level position.

Can you put solar panels on a garden building?

If however a garden building isn't available, then there are two main options for ground-mounted solar panels. Option one is when the panels are physically mounted on a sturdy framework. Most frames will be made of steel or aluminium, but they do need to be anchored to the ground.
