

Lease of solar panels

What is a solar lease?

Much like a car lease, a solar lease is an arrangement for you to have access to solar electricity without actually owning a solar system. In a solar lease, a company will install a solar system on your home and then charge you a monthly rate that replaces your utility electricity bill.

Can you lease solar panels?

Leasing solar panels is like leasing a car: you don't own the solar panels, but you do get to use the solar energy they produce for a fixed monthly payment to the solar company. Solar lease payments are typically designed to be lower than your pre-solar electricity bill, so you'll still see savings every month.

How much does a solar panel lease cost?

Solar panel leases cost between \$50 and \$250 per month, on average. The exact amount the homeowner pays depends on the amount of energy they use at home, the company supplying the lease, their location, and their credit score. The customer can choose between a number of financing options that best suit their needs.

What is solar leasing & how does it work?

Utilize clean energy: Solar leasing allows you to power your home with clean, renewable solar energy.
Predictable payments: Lease payments are outlined in your contract, providing you with predictable monthly costs, unlike regular utility bills, which can fluctuate widely.
