

Companies that crack the code on clean nickel first won't just meet regulations; they'll command premium pricing and preferential access to the fastest-growing battery markets worldwide. ...

We examine the causes and consequences of emissions-intensive nickel supply, concentrated in Indonesia, and discuss how the electric vehicle battery value chain can incentivize ...

Côte d'Ivoire exports nearly 50 per cent of its nickel ores and concentrates to China, while Zambia's nickel ores and concentrates are primarily exported to Switzerland.

Indonesia's booming nickel industry is coming under increasing scrutiny for pollution, toxic waste, and worker deaths as it rapidly expands its capacity to produce nickel for electric vehicle ...

Indonesia exported just under \$8 billion worth of nickel and its derivatives last year, making up 3.2% of the country's total exports. That's up from around \$800 million in 2020.

A more realistic measure of success is: - A bigger part of nickel exports is now going to processed and battery-related goods. - At least one or more battery cell factories that make reliable ...

Indonesia exported just under \$8 billion worth of nickel and its ...

Indonesian nickel companies can reduce reliance on coal-fired power and lower GHG intensity. However, nickel producers can do more to decrease their GHG footprint through the use of hydropower, solar ...

While still primarily used as an important alloying addition to produce stainless steel, nickel has become a key component in lithium-ion EV batteries. Other "green" applications for nickel ...

Nickel is a core input for electric vehicle (EV) batteries, renewable energy storage systems, and stainless steel production. With global EV sales projected to continue growing at double-digit ...

Indonesia is home to 22% of the world's nickel reserves, and its ban on nickel ore exports since 2020 has caused major shifts in the supply chains of strategic products such as electric ...
