

Northern Cyprus Super Double Layer Capacitor

Supercapacitors are breakthrough energy storage and delivery devices that offer millions of times more capacitance than traditional capacitors. They deliver rapid, reliable bursts of power for ...

Electric double layer capacitors (EDLCs), also known as super-capacitors, are energy storage devices primarily used to support power supplies in managing surge power demands, particularly in electric ...

Overview Design Background History Styles Types Materials Electrical parameters Electrochemical capacitors (supercapacitors) consist of two electrodes separated by an ion-permeable membrane (separator), and an electrolyte ionically connecting both electrodes. When the electrodes are polarized by an applied voltage, ions in the electrolyte form electric double layers of opposite polarity to the electrode's polarity. For example, positively polarized electrodes will have a layer of negative ions at the ...

Description This is an original high performance capacitor with a green cap. Our supercap offers an incredible 500F in a compact size. The capacitor can withstand up to 500,000 charge/discharge ...

SuperCapacitors are a valuable technology for providing a unique combination of characteristics, particularly very high pulse power and capacitance densities.

NIC is at the forefront of capacitor innovation with its cutting-edge double-layer capacitors, widely known as supercapacitors or EDLCs.
