

Outdoor wireless AP dual-band base station has no signal

HWAP80 outdoor high-power base station AP can cover a wide area of 600 meters, can easily meet the wide coverage requirements of outdoor WIFI projects, and specializes in high-power ...

When you have multiple APs in a wireless LAN (WLAN), ensure that the channels that the adjacent APs use are nonoverlapping. Nonoverlapping channels are frequency bands that do not ...

With this setup, I can obtain wireless connectivity without any problem while I am outside of the building. As soon as I take a single step into the building, I lose all wireless signal.

It could well be that the AP is broadcasting a wireless signal, but the cable connecting it to the internet isn't working. I would rule out the cable being faulty first.

In summary, I know what the issue is with my particular setup, and I was able to implement a workaround, but the WiFi connection won't work for me until Wyze is able to make the ...

Having trouble staying connected? Here's a large collection of tips to likely fix those common Wi-Fi signal drops and connection issues.

How do I troubleshoot my NETGEAR wireless access point? If you are having trouble with your NETGEAR wireless access point (AP), use the following tables to diagnose and resolve the issue.

For diagnosis, users need to verify the signal strength on both directions (AP to Client, and Client to AP). Check the AP signal strength detected at the client station.

When a channel scanning tool is used to detect signals, no 2.4 GHz signal transmitted by this AP is detected. If improper antennas are selected, signal strength in the coverage area is weak or even no ...

If the link rate is low or the RSSI/Signal Strength value is too low, this could cause an unstable connection. Try moving the device closer to the router/AP node and monitor again.
