

PV inverter warranty period

How long does a solar inverter warranty last?

That's why understanding your solar inverter warranty is so important. The SolarEdge inverter warranty covers string inverters for 12 years by default, with the option to extend coverage up to 20 or 25 years depending on the model. These inverter warranty periods help protect your investment by covering potential defects or premature failures.

What is a solar inverter product warranty?

Also known as a materials warranty, a solar inverter product warranty covers the integrity of the equipment itself. If your solar inverter has a defect or mechanical issue, if it breaks, or experiences unreasonable wear and tear, that's where your product warranty comes into play.

Do inverters have a warranty?

For example, string inverters have a 12 to 20-year warranty whereas microinverters and power optimizers come with a 25-year warranty. The labor costs linked with diagnosing, repairing, or replacing inverters are an important consideration that isn't covered by several manufacturers, despite the exceptions to this rule.

How long is a microinverter warranty?

Microinverters often include a 20- to 25-year microinverter warranty. Because microinverters are installed on individual panels, a single inverter failure won't shut down your entire system. Many microinverter warranties cover both parts and labor, making repairs easier if issues arise.

The warranty period for a home inverter is the length of time during which the manufacturer guarantees to repair or replace the product if it fails due to a defect in materials or workmanship.

String inverters typically come with 10-12 years of warranty coverage, whereas microinverters and power optimizers are often covered for 25 years. Labor and shipping expenses ...
