

Problems solved by technology [0005] The invention provides a dish-type solar photothermal power generation device, which has the advantages of good stability, long service life and low maintenance ...

It summarizes the technical point description of the patent document. A solar thermal power generation and heat collector technology, applied in the field of solar thermal power generation systems, can ...

The invention relates to a dish type marine stirling solar energy thermal power generation device which comprises a dish type light condensing reflector 3, a reflector support 4, a stirling ...

DISH-TYPE SOLAR CONCENTRATION DEVICE - Patent 2818807 [0003] Solar power generation is a major method to generate new energy resources from solar energy, including two ...

A technology of photothermal power generation and power generation subsystem, which is applied in the field of solar power generation, can solve the problems of signal line aging, damage, ...

A heat collector of a dish-type solar thermal power generation system and the solar thermal power generation system having the heat collector. The heat collector of the dish-type solar thermal power ...

The heat collector of the dish-type solar thermal power generation system comprises a heat collecting cavity and at least one layer of heat absorbing coil. The heat collecting cavity is provided with an ...

The dish-type Stirling solar power generation unit is so far a system that has the highest efficiency of solar power generation, exceeding 30%. The system almost consumes no water, and an output ...

technical field [0001] The invention relates to the technical field of solar thermal power generation, and more specifically relates to a dish-type solar heat storage power generation device. ...

The dish type solar heat power generation tracking control system has properties of simple structure, convenient use, low cost, reliable and accurate operation and high control precision, can track solar ...

Patent for dish-type solar power generation device
