How many photovoltaic modules can a laboratory test per day?

This laboratory can test more than 200 photovoltaic modulesper day with an uncertainty of less than 3%. Due to its characteristics,it is capable of testing modules of up to 1400 x 2700 mm of different types (high efficiency crystalline modules,bifacial modules,thin film modules and PERC or HJT solar cells).

What is PV Testing?

The testing of PV (photovoltaic) modules for solar panels is a method used to simulate environmental conditions to evaluate the durability and efficiency of the PV panel throughout its lifespan.

What is photovoltaic module testing?

Photovoltaic module (PV) testing is also a critical process used to determine quality assurance, safety, and reliability, and their functioning in actual field conditions. In order to enhance design and warranty support of PVs, manufacturers apply electrical measurements and man-made environmental and mechanical stress.
