

Pvoutput totals

The Live output listing shows an overview of all the live systems for the current day ordered by total energy generation. The times displayed on this page are in the systems' local time.

The only sensors I have available from the Shelly as Totals are Total Active Power (which is the instantaneous power used) and the Total Active Energy (which is a cumulative total that ...

PVOutput is a free service for sharing, comparing and monitoring live solar photovoltaic (PV) and energy consumption data. It is a worldwide catalog of installed PV sites containing details of location, output, ...

The only reason you are seeing daily resets from PVoutput is because you are using the status api of PVoutput, which only shows "day" data. I can see it is problematic to make this change ...

I'd like to upload total generation from all PV systems to a single PV Output account, I think your flow does this. I installed the Moment library, and I've added my key & SID to the single ...

On PVOutput, there is a quantity that gets calculated called Efficiency with units of kWh/kW (kilowatt-hours per kilowatt). It appears that this is a decent way to judge performance of ...
