

Renewable electricity cook islands

How much energy does the Cook Islands use?

The Cook Islands is a net importer of energy, in the form of petroleum products. Total energy consumption was 1,677,278,000 BTU (1.77 TJ) in 2017, of which 811,000,000 (0.86 TJ) was in the form of oil. In 2012 47% of imported oil was used in the transport sector, 30% in aviation, and 27% for electricity generation.

What is the future of power in the Cook Islands?

Now with full-time power, the future has taken a new shape for Cook Islands' residents thanks to government renewable energy - leading to an improved quality of life, and increased economy activity. The improved livelihood in the communities that now have the benefit of reliable, 24-hour power supply is immeasurable.

How was electricity produced in the Cook Islands?

Electricity in the Cook Islands was historically produced by diesel generators on each island. Fuel was imported from Auckland and required long sea voyages to get to the northern atolls, resulting in high costs and occasional supply disruptions.
