

Solar glass inventory increases

Inventory levels remain high due to the worsening supply-demand imbalance, and the off-season accumulation trend is expected to persist. While the short-term outlook remains bearish, ...

Photovoltaic glass inventory is expected to be further reduced, and the price of new orders is expected to rise, which is expected to drive profit recovery. The demonstration results of BC ...

Solar glass has emerged as the leading cost contribution to solar modules globally today, with eight suppliers headquartered in China accounting for more than 90% market share.

Against the backdrop of a continuous decline in module demand, the trend of supply surplus in glass became evident, and inventory days are expected to continue increasing in the future.

Why are glass prices rising? Explore tariff impacts, supply constraints, and regional trends driving 2025 increases. Click for actionable insights and future projections.

As demand surges, managing photovoltaic glass inventory efficiently has become critical for manufacturers, suppliers, and project developers. This article explores current trends, challenges, ...

The increase in demand drives the increase in glass demand, and inventory gradually declines, expected to drop from about 4 weeks at the end of February to around 20 days by the end ...

Although new production capacity has been added to photovoltaic glass, the short-term supply increase is limited. The relationship between supply and demand in the market is good, and prices are ...

During this phase, the industry enjoyed robust supply and demand, photovoltaic glass prices were at relatively high levels, and the company actively stocked up to meet growing demand.

With PV module capacity ramping up, glass suppliers have been investing in new solar glass production capacity. As in India and China, new facilities are popping up in North America, with ...
