

Solar heat-enhanced glass

Solar control glass is designed to reduce overheating in homes and buildings due to solar gain. By reflecting infrared radiation and allowing natural light through, it maintains indoor comfort ...

This advanced technology helps manage solar heat gain and color rendition throughout the day, creating a comfortable and sustainable indoor environment. It can also be combined with privacy glass for ...

The special properties of solar control glass let natural daylight in, while reflecting a high proportion of the sun's heat. The indoor space remains bright but cooler compared to uncoated glass.

Discover the innovative world of solar control glass, a key component in modern architecture that enhances energy efficiency, reduces glare, and provides UV protection.

Heat-resistant glass plays a crucial role in maximizing solar energy reliability and efficiency in modern photovoltaic systems. The integration of specialized heat-resistant glass in solar panels ...

Solar control glass is a type of glass designed to control the amount of solar heat and light that enters a building through its windows, doors, or skylights. As a result, it can improve energy ...

Sungate ThermL (TM) glass is a low-e coating engineered for use on the interior surface of a typical one-inch insulating glass unit (IGU) that dramatically improves U-values when paired with a Solarban®; ...

Pilkington Solar-E(TM) is a range of good solar control performance on-line coated glasses offering low solar heat coefficient gain, low reflectivity, reduced glare and low-emissivity. The products are ...

Solar control glass is a type of high-performance glazing that reduces the amount of solar heat entering a building. Filtering infrared radiation and reflecting excessive heat ensures ...

Solar control low-e glass reduces the amount of heat that gets absorbed into a home during the day, making it an ideal window glass for moderate to warm (or cooling-dominated) climates. Windows in ...
