

Solar power generation illegally occupies land

This trend has raised skepticism in rural communities, prompting questions about land value, environmental impacts, and the future of these properties once solar installations are ...

Solar power spreading across fields - at the expense of agriculture? Claims that solar installations are encroaching on valuable farmland and threatening our food security frequently circulate online.

China is installing solar farms faster than the rest of the world put together, leading to conflicts in its grain-growing heartland. There are no up-to-date figures for this land take, but solar ...

Oftentimes, when a landowner decides they would like to host a wind or solar farm on their property, they face a complex and contentious process to get there. There are federal, state, and ...

One farm family hopes to see a solar energy plant built on their land. But in some places, efforts to build utility-scale solar and wind farms are met with fierce opposition.

A growing alternative to using land solely for solar power generation is called agrivoltaics. As its name suggests, this strategy combines agriculture and solar power on the same piece of land.

Solar and wind farms are proliferating and increasingly taking up land worldwide, prompting criticism from rural communities and environmentalists. Solutions range from growing ...

Solar energy is depleting farmlands of their rich soils in the U.S. Midwest. The solar industry is moving into the U.S. Midwest, drawn by cheaper land rents, access to electric ...

Solar power generation occupies land, leading to economic loss, environmental degradation, and displacement of communities. Loss of arable land for agriculture, increased land ...

If you have been approached with a solar lease, or solar energy development is planned in your community or on nearby property, the Renewable Energy, Zoning and Land Use Attorneys at ...
