

Solar power generation in Western Australia

States and territories are driving Australia's acceleration towards a clean and reliable renewable energy grid. In fact, progress on new clean energy generation, like wind and solar, has ...

The project, which combines 229,500 solar panels and a 55MW/220MWh battery energy storage system (BESS), marks a significant step in the region's renewable energy transition.

In addition to the widespread adoption of rooftop solar, Western Australia is making significant strides in large-scale solar projects. These developments are critical for meeting the ...

Large-scale solar (PV) is an essential part of Western Australia's energy transition, providing an effective way to generate clean energy to meet our state's growing demand.

While the following links just cover a couple of Western Australia's major population centres, we have installers in our network for just about everywhere in the state.

Green Power Generation has inaugurated a 128MW hybrid solar PV and battery energy storage (BESS) project in Western Australia.

The Western Australia government has partnered with traditional owners of Ngarluma Country in the Pilbara, and Perth based conglomerate Perdaman, to progress the Ngarluma Green ...

Designed to ensure a consistent four-hour power supply during periods without sunlight, the project marks a significant step in sustainable energy development. Located in Western ...

This pioneering project is Western Australia's first large-scale solar and battery energy storage system, as well as the region's first solar hybrid project-setting a new benchmark for ...

During the peak, standalone BESS and a hybrid solar and battery project contributed 604MW of total generation, the highest level recorded for these technologies in the SWIS. At the ...
