

What are supercapacitors & EDLC?

Supercapacitors, also known as ultracapacitors and electric double layer capacitors (EDLC), are capacitors with capacitance values greater than any other capacitor type available today. Supercapacitors are breakthrough energy storage and delivery devices that offer millions of times more capacitance than traditional capacitors.

What is a supercapacitor EC?

Classification and properties of supercapacitor Supercapacitor is one type of ECs, which belongs to common electrochemical energy storage devices. According to the different principles of energy storage, Supercapacitors are of three types, , , , .

Are supercapacitors a battery?

That is why, despite battery-like construction, supercapacitors are classified as capacitors and not batteries. Compared to batteries, supercapacitors can go through several thousands of charge-discharge cycles. Therefore, they can serve as an excellent source of charge or power backup in battery-operated circuits.

Does a supercapacitor use an electrolyte as a dielectric?

In supercapacitors, the electrolyte does not serve as a dielectric. It only supplies charge carriers to the electrodes. Instead, the charge is stored by the accumulation of opposite charge carriers on electrodes.
