

The dangers of excessively high air temperature in steam turbine generators

Learn about the consequences of high temperatures, including decreased efficiency, increased wear and tear, reduced power output, potential overheating, increased fuel consumption, and safety ...

In a combined steam and gas turbine power plant, the loss of energy in the gas turbine exhaust is significantly reduced by utilizing its heat in a bottoming cycle; here the high temperature exhaust gas ...

In this paper, the effects of variation in ambient temperature, flue gas temperature and condenser pressure over performance of boiler and turbine cycle is presented. The study is carried ...

What happens if a steam turbine reaches a higher temperature? At higher steam inlet temperatures, heat extraction by the turbine will also be increased. An increase of about 100 °F (55 °C) will ...

2.0 RECOMMENDATIONS TO ENSURE GENERATOR RELIABILITY IN HIGH AMBIENT TEMPERATURES: If an existing generator installation starts to have problems related to very high ...

Even if immediate damage does not occur, prolonged exposure to elevated temperatures significantly shortens the lifespan of steam pipes and turbines. Therefore, stable and precise steam temperature ...

fuel was assumed to be at the ambient temperature of 25 °C and 1 atm. As shown in Fig. 2, the second law efficiency is insensitive to ambient air temperature, for instance at excess air of 25%, the second ...

The preceding list includes dangers that only affect the turbine. Other hazards specific to the boilers, generator, transformers, and high-voltage connections can also initiate a turbine generator trip.

The aim of this research is to investigate the effect of ambient air temperature on the steam generation. A parametric study was performed based on exergy analysis to study the impact of ambient air ...

This information discusses how very high ambient temperatures impact generator performance, service considerations to ensure reliability, and changes that may have to be made to existing ...

The dangers of excessively high air temperature in steam turbine generators
