What is steel grating?

Steel grating is a construction material consisting of steel grating plates. Steel grating is mainly used for road gutters, etc., and is made up of steel plates in a grid pattern to drain rainwater away from the road while acting as a lid to prevent people and objects from falling. It is typically formed of flat plates and intersecting steel rods.

What are the different types of steel gratings?

Steel gratings are available in various types according to the shape of the trench in which they are installed, including groove lid, square lid, and brimmed types. The groove lid type has a groove on the bottom surface to receive water. The square lid type has a flat surface that allows water and air to pass through easily.
