What is a lead acid battery?

The lead acid battery works well at cold temperatures and is superior to lithium-ion when operating in sub-zero conditions. Lead acid batteries can be divided into two main classes: vented lead acid batteries (spillable) and valve regulated lead acid (VRLA) batteries (sealed or non-spillable). 2. Vented Lead Acid Batteries

Are lead-acid batteries corrosive?

Lead-acid batteries contain sulphuric acid and large amounts of lead. The acid is extremely corrosive and is also a good carrier for soluble lead and lead particulate. Lead is a highly toxic metal that produces a range of adverse health effects particularly in young children.

What is a drained lead acid battery?

Undrained Lead Acid Batteries also termed wet batteries. Drained Lead Acid Batteries also termed drained batteries. The entire process of recycling requires a co-ordinated approach and is outlined below.

Where do lead acid batteries come from?

Pacific Batteries Ltd in Fiji imports bulk lead for the manufacture of lead acid batteries. There is no recycling of lead acid batteries recovered in Fiji for their operations. ASPA in American Samoa has collected a container of batteries for shipment to New Zealand. This operation was subsidised by the EPA to help cover costs.
