

China has just connected what it believes to be the world's biggest solar power plant to the grid in northwestern Xinjiang.

The 1-million-kilowatt integrated concentrated solar-thermal power (CSP) and photovoltaic (PV) energy demonstration project in Hami, in Northwest China's Xinjiang Uygur Autonomous Region, has ...

Designed by the Northwest Electric Power Design Institute, the Hami Solar Thermal Power Plant is among China's first generation of solar thermal power demonstration projects and the ...

Northwest China's Xinjiang Uygur autonomous region's energy storage capacity is accelerating at an unprecedented pace, fueled by a boom in renewable energy projects that position ...

URUMQI, Sept. 20 (Xinhua) -- A 1,000-megawatt power project combining solar thermal and photovoltaic power generation has been connected to the grid in northwest China's Xinjiang Uygur ...

In Turpan, the photovoltaic area for solar-thermal power project of China Energy Engineering Turpan is ready for operation, and the solar thermal mirror field has been installed with ...

The new solar plant, with an installed capacity of 1GW and an investment of 2.7 billion yuan (approx. US\$373.41 million), is part of a low carbon park. It is expected to be connected to the ...

A one million-kilowatt integrated solar-thermal and photovoltaic comprehensive energy demonstration project has officially connected to the grid for power generation in northwest China's ...

To tackle potential risks of panels, including short circuits, overturns by strong winds, and damage caused by wild animals, the base introduced a smart system that can collect power ...
